THE PROGRAM and OBJECTIVES

The FBI is in your waiting room – Now What?
Is your office ready and able for the call for antemortem records?
This course is designed as an introductory background on forensic odontology with case presentations and hands-on participation of radiographic imaging.

In the morning session, Dr. Castle will provide an introductory background on forensic odontology then proceed with discussing various cases throughout his military career. Dr. Hellstein will follow with how your dental office may need to interact and respond with requests for antemortem records and radiographs.

In the afternoon session, participants will have a hands-on workshop comparing a series of antemortem and postmortem radiographs to establish identification, possible identification, and no identification for each case. Two different sets of approximately 20 identifications will be the challenge for the participants with the first set being an introductory set and the second being more complicated.

At the completion of the program, participants should:
• Be better aware of the details associated with forensic odontology,
• Have a better understanding of how to properly utilize radiographic images to establish a dental identification, and
• Know how to respond to requests for antemortem records.
